

Instructions:

The European Houses are based on the old 'Village in a Bag' sets that were first sold in the 1960s. These sets had a handful of small buildings, somewhere between HO and N scale. They were likely meant for TT (1/120 in the US). The houses were in white or pastel colors, with red or dark roofs and contrasting windows and doors. Original plastic sets had window openings, but the current ones by IHC only have frames.

Cut out the buildings, fold the appropriate tabs and tape together. Use the Eurorooftiles for rooftops, Eurorooft1 is plain, so that you can print it on colored paper. The other three Roof files are colored, for using a color printer.

You may copy the files only for personal use, or use by teachers in K-12 schools for class projects.

Eurohouses are the buildings themselves. One-story houses come with all side of the house and extra doors.

Two-story houses are only half. You must print two copies to make a house.

The extra door is scaled slightly larger. If the door on the house looks too small with your figures, just cut out the larger door and glue it over the smaller. Some programs might let you cut and paste before printing. The smaller doors should be fine for 25mm figures and most 28mm and S Scale (1/64 scale) miniatures. However, for some 28mm and for 30mm to 40mm and O Scale size (1/48), the larger door works better.

Assembly should be self-explanatory: just fold tabs and walls in the right spot, tape or glue together, and then add the roof. Use a light cardstock such as #67 bristol or #65 cover for added strength. You can also cut foam or wood to size and paste the printed pieces onto it.
